

HOLIDAY

in FRANCE

A thirteen year old named Phuoc went to France on holidays with his family for two weeks. Here are some entries from his travel diary.

WEDNESDAY

Supermarket slip-up

Dad decided he knew how to say *bonjour* (hello) and *je voudrais* (I would like) and was therefore ready to order from the deli at a French *supermarché*. Mum, Thao and I watched Dad march up to the counter as though he had been there a thousand times. There was some mouth-watering ham and lots of cheese but to my horror Dad pointed to *foie gras*, which is liver! As I was about to protest, Dad said something which made all the women behind the counter laugh and laugh. Dad's face turned blood red and we started to get the giggles too. Later Dad told us he had asked for human liver instead of duck liver.

THURSDAY

Lunchtime laziness

We were sitting, waiting on a bus in Carcassonne. It was lunchtime. Suddenly I saw a group of French teenagers meandering towards the bus. They filed onto the bus, chatting loudly in French. I looked at their clothes and noticed enviously that they did not have school uniforms. 'I wonder where they're going?' Mum smiled as if she knew something I didn't. 'They're going home for a two-hour lunch break.' Seeing my mouth drop open like a fish, Mum quickly whispered, 'But they have to go back to school until about 6 pm.'

SATURDAY

Sock shambles

At our French friends' colossal wooden front door, Thao and I kicked off our shoes and walked inside. As I was staring in wonder at the stone walls of the house, about as thick as a 30 cm ruler, Lynette frowned and, pointing to our feet, said something speedily in French. I tried to remember the last time I changed my socks. She then pointed to a picture on a flyspray can: a scorpion! I realised that she wanted us to keep our shoes on. I jumped up and down crazily, away from imaginary scorpions. Everyone stopped talking and looked at me. I stopped jumping around like an idiot and burst out laughing.

1. 'Mum, Thao and I watched Dad march up to the counter as though he had been there a thousand times.'

In the context of what happened in the supermarket, this statement suggests that

- (A) Dad had travelled to France before.
(B) Dad liked shopping at the supermarket.
(C) Dad was acting like he was a local person.
(D) Dad had bought French food at a deli before.
2. Which word is closest in meaning to 'meandering'?
- (A) wandering (B) jogging (C) rushing (D) stumbling
3. In Thursday's entry, what does the word 'enviously' suggest about the way Phuoc was feeling?
- (A) He admired the French students' clothes.
(B) He wished that his school did not have uniforms.
(C) He wanted to find out more about French culture.
(D) He would have liked to go home for lunch as well.
4. In Saturday's entry, Phuoc wrote that he 'burst out laughing' because
- (A) he realised he had overreacted.
(B) the scorpions had not bitten him.
(C) everyone was making fun of him.
(D) he was happy he was wearing socks.
5. When the same sound is repeated at the beginning of words, it is called alliteration. Which of the following is an example of alliteration?
- (A) 'turned blood red'
(B) 'Lunchtime laziness'
(C) 'Seeing my mouth drop open like a fish'
(D) 'Sock shambles'

For questions 6 and 7 choose the correct option to complete the sentence.

6. We wanted to keep in touch with our teacher after she left our school _____ we didn't have her new address.
- (A) besides
(B) but
(C) so
(D) because
7. The shop owner was disappointed. _____ there had been a lot of advertising, toy sales remained slow.
- (A) However
(B) In spite of
(C) Even though
(D) On the other hand

Oh dear

1-1
with two minutes to go.
The coach calls,
'Ron, warm up.'
I can see it now.
The winning goal in the last second.
The coach says,
'Just kick the ball when it comes to you,
hard as you can.'
Simple.
The ball comes to me
as soon as I run onto the field,
so I kick it.
It's a stunning kick.
It goes thirty, no forty metres.
It sails high over the defenders,
and bounces and rolls,
and bounces and rolls,
and stops at the feet
of the opposition striker
who kicks it into the goal.
The winning goal!
The winning goal for the *other* team,
set up by a beautiful forty-metre pass
the *wrong* way, by *Do-wrong Ron*,
legend in his own lunchtime.

Steven Herrick

8. When the narrator says 'I can see it now' he is
- imagining he is coaching the team.
 - remembering the last game he played.
 - looking at the scoreboard.
 - imagining the outcome of the game.
9. Why has the poet chosen to repeat the words 'and bounces and rolls'?
- to add to the suspense in the poem
 - to introduce a rhyme scheme into the poem
 - to suggest that Ron is very nervous
 - to describe the skill of the opposition striker
10. What does the title of the poem reflect?
- how the coach feels about the team's performance
 - how Ron feels at the end of the match
 - how inexperienced Ron's team is
 - how the opposition feels when the game is over
11. This poem is written from the point of view of
- the coach.
 - the opposition striker.
 - Ron.
 - Steven Herrick.
12. Which underlined word from the poem is used as both a verb and a noun?

	Verb	Noun
(A)	'Ron, warm <u>up</u> .'	'set <u>up</u> by a beautiful forty-metre pass'
(B)	'The winning <u>goal</u> in the last second.'	'who kicks it into the <u>goal</u> .'
(C)	'Just <u>kick</u> the ball'	'It's a stunning <u>kick</u> .'
(D)	'when it <u>comes</u> to you'	'The ball <u>comes</u> to me'

For question 13 choose the sentence which is PUNCTUATED CORRECTLY.

13. (A) 'Mum,' John asked, 'do you know if the new bookshop sells children's books?'
 (B) 'Mum,' John asked. 'do you know if the new bookshop sells childrens books?'
 (C) 'Mum,' John asked. 'Do you know if the new bookshop sells childrens books?'
 (D) 'Mum,' John asked, 'Do you know if the new bookshop sells children's books?'

Read *Nine men's morris* and answer questions 14 to 20.

NINE MEN'S MORRIS

Nine men's morris has been played for thousands of years by cultures all over the world, from Ancient Egypt to China, from Troy to Neolithic Ireland. The reason for the game's long popularity lies in its simple form. You can scratch the shape of a board in the earth, pick up some pebbles and play.

Nine men's morris is best described as a complicated version of noughts and crosses. One of your aims is to form a line of three men. This allows you to permanently remove one of your opponent's pieces from the board.

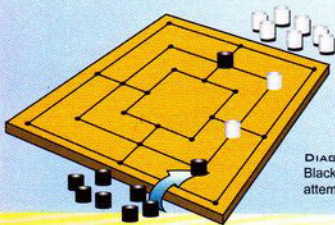

DIAGRAM 1:
Black's move has blocked White's attempt to form a row of three.

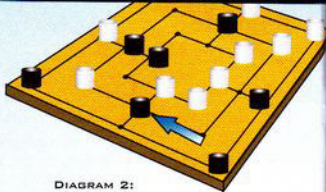

DIAGRAM 2:
Black moves a man ready to form a line of three on the next turn.

Moving and winning

There are two ways to win: by blocking your opponent's pieces so that they cannot move, or by leaving your opponent with just two men, making it impossible to form a line of three.

The game is played in two phases. In phase one, the two players take turns to place their nine men on the board, one by one. Men are placed on the points where lines intersect (Diagram 1).

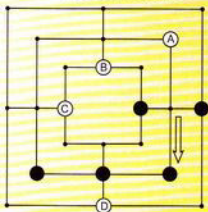

14. What is the writer referring to in the first paragraph when he describes the game's 'simple form'?

- (A) Winning the game is easy once a player knows how.
- (B) Only basic equipment is needed to play the game.
- (D) Anyone can learn to play the game.
- (C) There are only a few basic rules.

15. What is the main purpose of the first paragraph?

- (A) to describe the origins of the game
- (B) to list the cultures that provided the game's rules
- (C) to explain that our ancestors did not have boards and game pieces
- (D) to show that the game has a long history and widespread popularity

16. Below are the two rolling lines of three as in Diagram 3 (only some pieces are shown). If the black piece has just moved in the direction of the arrow, which would be the best white piece to capture?

After all 18 men have been placed on the board, phase two begins. The players manoeuvre their pieces, still taking turns, and try to form a line of three. Men are moved one step along the lines to the next point, as long as it is vacant (Diagram 2).

Three in a row

If you manage to make a row of three men along a straight line, you can remove any one of your opponent's pieces as long as it is not part of a line of three. A piece from a line of three can be captured only if no other men are available.

The line of three cannot be used to take another enemy piece on your next turn. First, one of your three men must move away and then move back into position on the turn after. Be careful that your opponent does not block the line when you move away. If you are skilful enough, you might be able to create a lethal formation: two rolling lines of three (Diagram 3).

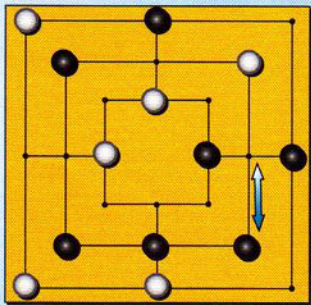

DIAGRAM 3: Black breaks one row of three and, at the same time, forms another. On Black's next turn, the piece moves back again. Each time, White loses a man and has little chance to fight back.

17. In the text, the use of the word 'lethal' means that
 - (A) the move must be used carefully.
 - (B) the move has been well thought out.
 - (C) a player requires a high level of skill.
 - (D) the opponent will certainly lose the game.
18. Which of the following correctly describes a rule for playing nine men's morris?
 - (A) If a piece is in a row of three, it can never be captured.
 - (B) All nine of the opponent's pieces must be taken for a player to win.
 - (C) A player loses the game when there is nowhere to move their pieces.
 - (D) The positioning of the pieces in phase one has to be the same every time.
19. The text next to each diagram is called
 - (A) a label.
 - (B) a caption.
 - (C) a subtitle.
 - (D) a footnote.
20. Which of these options is a command?
 - (A) 'You can scratch the shape of a board in the earth'
 - (B) 'Men are placed on the points where lines intersect'
 - (C) 'Be careful that your opponent does not block the line'
 - (D) 'Each time, White loses a man and has little chance to fight back.'

Out of bounds

I left the house and did what I had so often been told not to do: I climbed over the low, ivy-covered wall of the garden of the Convent of Sainte-Antoine and walked among the trees towards the building. When I reached the low shrubs, I went down on my knees and crept along until I could see the small courtyard of the convent. There was no-one about. I walked past the old cactuses in pots and was about to risk crossing the courtyard, when a sudden shadow in the doorway and the sound of a little bell surprised me. I dived behind a couple of low willow trunks. Soeur Béate came out. She held a small copper bell in her hand which she swung carefully. When she made soft sucking and clicking noises with her mouth, striped cats appeared from different parts of the garden, among them Copernicus. She bent and put a dish down on the ground.

The cats approached soundlessly, tails up in the air. They stalked around the dish and nipped like spoiled women at the sauce in which pieces of meat floated. Soeur Béate didn't stay; she disappeared almost immediately into the coolness of the convent building. I stood up and ran past the doorway like a chicken escaping from its pen. The cats barely looked up. Their bodies undulated gently as they swallowed. I walked past the herb garden and the gravestones at the side of the building.

The hardest part was getting past the four geese in their run. The moment I appeared they started gabbling and wouldn't stop till I got to the small pond in among the greenery. I pulled my T-shirt over my head and took my shoes off. The mud felt warm on my feet. I waded through a narrow strip of tall wild irises and reeds. The roots stopped me sinking too far into the mud, and the water there was lukewarm. Only where the water reached to my waist did it get cooler. Air bubbles rose along my legs, bringing black grit to the surface with them.

'This is more like it,' I thought when I felt my body cooling off and relaxing. 'This is better than a shower. Better than sitting still near that stupid house with that boring garden. This they'd envy me, those guys back home with their barbecues.' I sniffed the scent of decaying plants. If I stayed still, dragonflies skated over the water towards me. Even though there was no wind, the surface of the water rippled occasionally. The air was full of the hum of insects.

21. The narrator realised someone else was present when
- (A) he heard a bell ringing.
 - (B) he saw the cats coming.
 - (C) he saw Soeur Béate standing in the courtyard.
 - (D) he heard Soeur Béate making noises with her mouth.
22. Which quotation from the second paragraph suggests that the cats were uninterested in the narrator's presence?
- (A) 'tails up in the air'
 - (B) 'stalked around the dish'
 - (C) 'nipped like spoiled women'
 - (D) 'barely looked up'
23. The word 'undulated', as it is used in the text, means that the cats' bodies
- (A) vibrated.
 - (B) stiffened.
 - (C) moved up and down.
 - (D) wobbled from side to side.
24. Which word best describes the narrator's attitude when he compares his own situation with that of the people back home?
- (A) disappointed (B) smug (C) jealous (D) spiteful
25. What is the purpose of the detailed description of the narrator's experience in the pond?
- (A) to show that he was enjoying himself
 - (B) to hint that the pond contained hidden dangers
 - (C) to emphasise the beauty of the pond's natural setting
 - (D) to allow him to remember everything when he went home
26. Which quotation from the text is **NOT** a grammatically complete sentence?
- (A) 'There was no-one about.'
 - (B) 'Soeur Béate came out.'
 - (C) 'Only where the water reached to my waist did it get cooler.'
 - (D) 'Better than sitting still near that stupid house with that boring garden.'
27. Which word best describes the narrator?
- (A) dreamy (B) adventurous (C) careless (D) trustworthy

Tech know: Microwave oven

Accidental discovery

During the 1940s, US engineer Percy Spencer was designing and testing parts for radar transmitters. While he was working near an active microwave transmitter, a chocolate bar in his pocket melted. Thinking that the microwaves may have caused it to melt, he placed popcorn kernels in front of the transmitter, which caused the kernels to pop.

Percy's discovery led to the invention of the microwave oven. Within 40 years, the 'microwave' has become one of the most popular appliances in the kitchen.

How does it work?

A microwave oven consists of a box lined with aluminium shielding and a magnetron which emits microwaves. When the microwave oven is operating, microwaves 'fire' out of the magnetron. Some of the microwaves are absorbed by the food and those that are not, reflect off the metal inner casing back towards the food. When they are absorbed by the food, they are **converted** directly into heat in a process known as dielectric heating.

Dielectric molecules inside the food have a positive and a negative end—like a magnet. When these molecules absorb microwaves, they align themselves with the microwave's electric field. Because microwaves are moving in all directions and the food is rotating, the molecules in the food continuously turn to align with the incoming microwaves. This constant turning and twisting of the molecules heats them and the surrounding region, resulting in cooking.

Fats and sugars inside food are dielectric molecules, but water is the most affected by microwaves. The more moisture there is in the food, the more quickly it will be heated in the microwave oven. Water molecules in ice are frozen and cannot move easily. This is why it is best to partially thaw or break apart and add a small amount of water to frozen food before cooking it in a microwave oven.

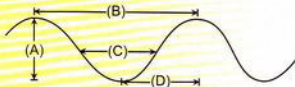

Finally, you may have noticed the holes in the aluminium shielding that line the door. The wavelength of the microwaves used for cooking is approximately 12 centimetres in length. This wavelength means the microwaves cannot 'squeeze' through the holes. But light has a smaller wavelength and fits through the holes. This allows you to watch your food cook.

What is wavelength?

Imagine electromagnetic waves as waves on the ocean. The distance between the top of one wave and the next is called the wavelength.

28. Why did Percy Spencer do a test using popcorn kernels?
- to find out whether it was safe to heat food with a transmitter
 - to determine which transmitter had caused the chocolate bar to melt
 - to observe if popping corn required the same energy as melting chocolate
 - to investigate whether placing food near a transmitter would heat and cook it
29. Why is the word 'fire' written in quotation marks in the text?
- It shows that the writer is exaggerating.
 - It is a less technical way to explain what happens.
 - It explains that the microwaves travel at high speed.
 - It emphasises the heat which is created by microwaves.
30. According to the text, what is the main purpose of the aluminium shielding inside a microwave oven?
- It retains the heat that comes from cooking the food.
 - It allows light waves out so that the user can see the food cook.
 - It protects the user from being exposed to too many microwaves.
 - It reflects the microwaves that have not yet been absorbed by the food.
31. In the text, the word 'converted' can be replaced by
- changed.
 - transferred.
 - adjusted.
 - created.
32. What is the purpose of the rotating dish inside the microwave oven?
- to create an electric field in the microwave oven
 - to allow the microwaves to reach the centre of food
 - to increase the movement of the molecules inside the food
 - to ensure that both ends of the molecules respond to the microwaves
33. 'But light has a smaller wavelength and fits through the holes. This allows you to watch your food cook.'
- What is the best way to combine the two sentences without changing their meaning?
- But light has a smaller wavelength, allowing you to watch your food cook and fitting through the holes.
 - But having a smaller wavelength like light fitting through the holes allows you to watch your food cook.
 - But light, which has a smaller wavelength, fits through the holes, allowing you to watch your food cook.
 - But light allows you to watch your food cook, having a smaller wavelength and it fits through the holes.
34. Which option correctly shows what a wavelength is?

35. The main purpose of this text is to
- explain.
 - argue.
 - report.
 - recount.

CHILD'S PLAY

The year is 1150 BC. The location is a meadow not far from Stonehenge in Britain.

'Are we all present?' boomed Drystan, the 'leader' of our little band, while adjusting his lately acquired deerskin cloak which he wore as his symbol of leadership.

Eleven voices murmured agreement and one asked, 'Is this a birthday party?'

'No laughter in the stone circle,' Drystan tried to boom again while undoing the bone toggle of his cloak which was threatening to constrict his breathing.

'The purpose of our meeting today is to discuss design ideas for a small shelter so we can have our meetings in all weather conditions,' Drystan informed us.

'We could use a few animal skins stretched over a timber frame,' I suggested.

'That's a dumb idea. Anyou,' Drystan intoned.

Clearly, praise and encouragement were aspects of leadership that Drystan needed to develop further.

'We will build our shelter using stone,' stated Drystan.

'Yes, Drystan. Of course, Drystan,' we all chimed.

All day we collected stones, piling, wedging and balancing them until we had a shelter that looked like it had been designed by a landslide. Still, it seemed to please Drystan and that's all that mattered really. The last job of the day

involved rolling an extra large log near the entrance to the shelter. Drystan would use this as his podium when he was directing his horde of followers.

Dutifully we pushed the designated log in the approximate direction of the shelter. The remaining events are listed in our (secret) meeting records as follows:

1. After a bit of a push, the log gathered speed as a result of a slight incline.
2. The log took off on its own accord and proceeded (quickly) in a northerly direction towards Stonehenge.
3. The log came to rest against a stone pillar at the entrance and the pillar was dislodged.
4. Large stones fell like dominoes around the circle that was Stonehenge.
5. In unspoken agreement we all left the scene immediately. Drystan had a head start on all of us.

A few months later I overheard a conversation among the village elders as to the cause of the Stonehenge catastrophe. One voice was louder than the rest: 'An unusual alignment of stars in combination with a rainbow and an easterly wind!' I recognised it as the voice of Drystan's father. The other elders nodded their agreement. Drystan must have inherited his father's leadership skills, I concluded, because they both have strong voices.

36. What do the words 'lately acquired' suggest about Drystan's cloak?
- (A) He had recently got the cloak.
 - (B) Nobody else had a similar cloak.
 - (C) He had to work hard to earn the cloak.
 - (D) Only he was allowed to wear the cloak.
37. 'Clearly, praise and encouragement were aspects of leadership that Drystan needed to develop further.'
- Which word best describes Anyou's tone in this sentence?
- (A) hurt
 - (B) pitying
 - (C) doubtful
 - (D) sarcastic
38. When Anyou described the shelter as looking like it had been 'designed by a landslide', he meant that it was
- (A) ruined. (B) messy. (C) rocky. (D) dangerous.
39. According to Anyou, why was Drystan the leader?
- (A) He had the loudest voice.
 - (B) He had the cleverest ideas.
 - (C) He had a father whom the children feared.
 - (D) He had been given a symbol of leadership.
40. The writer changes from a narrative style to a list in order to
- (A) imitate the language spoken by the village elders.
 - (B) provide an alternative opinion about what happened.
 - (C) make the recount of the events that occurred seem very objective.
 - (D) illustrate the writer's different opinion about the children after what happened.
41. Which point in the meeting notes supports the idea that the notes were probably written without Drystan knowing about it?
- (A) Point 1 because it states that the children were not to blame.
 - (B) Point 2 because it suggests that the log had a mind of its own.
 - (C) Point 4 because it tries to make the toppling of the stones seem sudden.
 - (D) Point 5 because it suggests that the leader was the first to leave.
42. Which is **NOT** a possible reason for Drystan's father's explanation for the toppling of Stonehenge?
- (A) He wanted to protect his son from blame.
 - (B) He was trying to reassure the frightened villagers.
 - (C) He had predicted correctly that Stonehenge would fall.
 - (D) He wanted to impress the village elders with his knowledge.

What lies beneath?

Many of the world's most famous artworks are hundreds of years old, and yet are still in great shape. But did you know that there may be a lot more to the painting than what you see on the surface? So how can we find out what a painting is really like without destroying it? And how can we ensure that old paintings are well maintained?

John Payne (pictured) is a Senior Paintings Conservator at the National Gallery of Victoria, Australia. An expert in looking after old paintings, John says that whenever paintings come into the studio for restoration, they are first carefully examined using different scientific techniques.

'This sometimes reveals drawings under paint layers or changes by the artist,' he says. 'Last year, we discovered an anonymous 16th century painting was actually a rare portrait of Lucretia Borgia.' Lucretia was the daughter of a Pope whose family was rumoured to be involved in several murderous plots. 'We worked out that the painting was done by an Italian artist called Dosso Dossi.

'We've also analysed the ground layer (the layer under the paint) in a painting originally thought to be a self-portrait by the Dutch painter, Rembrandt. Other people later said that it wasn't by Rembrandt at all. But the ground layer was found to be of a type only ever used in Rembrandt's studio, and so the painting had to have been made there.'

Damage control

John says that the most common form of damage to paintings is accidental. 'Physical damage like dents, scratches and tears are the most common things we see,' he says. 'There are also changes to the colours of the paint, which happens when they are exposed to light. Plus, varnishes and oils that are used on the paintings can also discolour over time. This is not actually damage, but can change the appearance of the painting.'

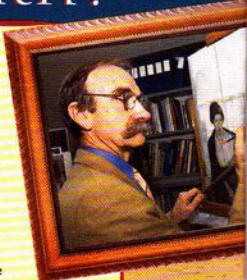

So how do conservators restore paintings to a good condition and then keep them that way?

They do it in two ways: by conservation and restoration. 'Conservation includes all the ways of preserving paintings, so that they are protected during handling, transport, storage and display,' explains John. Lots of art is made from something that was once living, such as sculptures carved from wood or paintings on canvas made from natural fibres. Just as human bodies are composed of about 65 per cent water, many works of art are made from natural materials that have a high water content. Therefore the water content of the air in the gallery can cause art to deteriorate. 'If a painting is in a room that's too hot or too humid, the paint can crack or peel and fall off; or if an artwork is painted on a piece of wood, the wood might crack and split,' explains John.

'Restoration is a smaller part of the 'big picture' of conservation—fixing up areas of loss and damage; cleaning, either of surface dirt or discoloured old varnish layers; and repairs.'

43. What is John Payne's main responsibility at the gallery?

- (A) to collect valuable artworks
- (B) to research the history of artworks
- (C) to discover the original artists of paintings
- (D) to ensure that paintings are kept in good condition

44. In the third paragraph the word 'This' refers to
- (A) a scientific technique.
 - (B) the process of restoration.
 - (C) a painting which is being restored.
 - (D) an examination using different scientific techniques.
45. How did art experts conclude that a self-portrait by Rembrandt was genuine?
- (A) They analysed the painting and matched it to the paintings of that period.
 - (B) They examined the ground layer and found that its type was used only in his studio.
 - (C) They discovered statements from later artists which confirmed that he was the painter.
 - (D) They confirmed his unique style of layering paint when the painting was accidentally damaged.
46. According to the text, what is one way to prevent a painting from deteriorating?
- (A) keep the painting away from light
 - (B) coat the painting with light colours
 - (C) cover with a varnish to protect the painting
 - (D) use oils that are the same colour as the paint
47. What special care needs to be taken with artworks that have a high water content?
- (A) They must be stored where the air is very humid.
 - (B) They need to be placed in rooms which are warm.
 - (C) They have to be displayed away from works with natural materials.
 - (D) They have to be kept where the amount of water in the air is controlled.
48. Which of the following is closest in meaning to this statement?
'Restoration is a smaller part of the 'big picture' of conservation'
- (A) Restoration is one aspect of conservation.
 - (B) Restoration is less important than conservation.
 - (C) Restoration could damage the conservation process.
 - (D) Restoration is considered minor work compared to conservation.
49. What is the difference between conservation and restoration?
- (A) Conservation includes the processes of handling, transport, storage and display whereas restoration is only concerned with handling.
 - (B) Conservation is about repairing damage to ground layers whereas restoration is about repairing damage to surface layers.
 - (C) Conservation refers to work done on whole paintings whereas restoration refers to work done on the details.
 - (D) Conservation is about protecting artworks from damage whereas restoration is about repairing them.
50. A rhetorical question is a question to which no answer is provided or required because the answer is obvious.
- Which of the following is an example of a rhetorical question?
- (A) 'But did you know that there may be a lot more to the painting than what you see on the surface?'
 - (B) 'So how can we find out what a painting is really like without destroying it?'
 - (C) 'And how can we ensure that old paintings are well maintained?'
 - (D) 'So how do conservators restore paintings to a good condition and then keep them that way?'
