**DO NOT OPEN THIS BOOKLET UNTIL INSTRUCTED.**

**50 QUESTIONS**

**TIME ALLOWED: 50 MINUTES**

**STUDENT'S NAME:**

Isaac

Read the instructions on the **ANSWER SHEET** and fill in your **NAME, SCHOOL** and **OTHER INFORMATION**.

Use a 2B or B pencil.

Do **NOT** use a pen.

Rub out any mistakes completely.

You **MUST** record your answers on the **ANSWER SHEET**.

Mark only **ONE** answer for each question.

Your score will be the number of correct answers.

Marks are **NOT** deducted for incorrect answers.

There are **50 MULTIPLE-CHOICE QUESTIONS** (1–50).

Use the information provided to choose the **BEST** answer from the four possible options.

On your **ANSWER SHEET** fill in the oval that matches your answer.

Questions may sometimes be placed next to each other.

Make sure you read **ACROSS** the page and answer the questions in the correct order.

You are **NOT** allowed to use a dictionary or an electronic translator.

Read *Fire ants!* and answer questions 1 to 6.

# Fire ants!

It wasn't until we were right underneath the tree that I finally spotted the sloth. It dangled upside down from a branch about three metres above our peke-peke, the long motorised canoe that had brought us all the way up the Matatoro River from the Amazon. Now I understood why I hadn't seen it earlier.

'It's *green!*' I said.

Uncle Shaun nodded. 'At certain times of year they get algae—kind of like moss—growing in their fur. Want to get a photo?'

I pulled my new camera out of its waterproof carry case. It was an early birthday present from my parents, who thought it would come in handy on this trip with my world-famous botanist uncle. So far we'd seen caimans (a type of alligator), capybaras (rodents the size of sheep), freshwater dolphins, giant otters, four kinds of monkey and about a million birds—but this was my first sloth. I tried to find it on the LCD screen.

'Can we go forwards a bit? There are too many leaves in the way.'

Caesar hauled sideways on the outboard motor. It had a really long propeller shaft and was hard to steer.

*Bump!*

The front of the peke-peke hit a submerged log and began to spin around in the current. Uncle Shaun grasped an overhead branch to steady us. But the branch was hollow; it snapped off in his hand. And out of its honeycombed interior came a shower of squirming brown insects.

'Fire ants!' cried Caesar. 'Look out, Mr Shaun!'

His warning came too late. Already Uncle Shaun was covered from head to foot in a blanket of fire ants. Their stings are worse than bees.

Caesar didn't hesitate. Scrambling forward, he grabbed Uncle Shaun around the middle, lifted him out of his seat and rolled over the side with a huge, two-man splash.

1. What is the setting of the text?
  - (A) a remote part of the Amazon River
  - (B) a remote part of the Matatoro River
  - (C) near the source of the Amazon River
  - (D) where the Matatoro and Amazon rivers meet
  
2. Based on information in the text, the narrator's parents could be described as
  - (A) cold and distant.
  - (B) anxious and fearful.
  - (C) positive and excitable.
  - (D) thoughtful and practical.
  
3. Why did the narrator say, 'Can we go forwards a bit?'
  - (A) He was anxious to avoid the fire ants.
  - (B) He wanted to dodge the submerged log.
  - (C) He was impatient to continue on the journey.
  - (D) He wanted to get into a good position for a photo.
  
4. Onomatopoeia is when a word sounds like the thing it describes.  
Which word from the text is an example of onomatopoeia?
  - (A) 'spin'
  - (B) 'snapped'
  - (C) 'shower'
  - (D) 'squirming'
  
5. The word 'submerged' means that the log
  - (A) lay close to the river bank.
  - (B) was completely underwater.
  - (C) had recently fallen into the river.
  - (D) was rotten and filled with insects.
  
6. Which of the following best describes the situation at the end of the text?
  - (A) a tense standoff
  - (B) a satisfying resolution
  - (C) a dramatic complication
  - (D) a conflict between the characters

# The Trojan Horse

Sinon hid in the shadows of the towering walls that protected the city of Troy. As he waited, he nervously rehearsed his lines. The success of the whole plan rested on his ability to convince the Trojans that their Greek enemy had finally abandoned their siege of Troy and set sail for Greece.

He looked at the huge wooden horse that the wily Greeks had built and positioned outside the gates of the city. He wondered how his fellow soldiers were faring inside its vast stomach. They must be so hot and uncomfortable!

Finally some curious Trojans spied the enormous horse and came to investigate. For the first time in ten years the bustling Greek camp outside the city walls lay empty and silent. Were they really free at last? And what was the meaning of this huge horse? Sinon took a deep breath, stepped from his hiding place and began his extraordinary story.

'Have mercy on me!' he begged. 'My Greek brothers left me behind when they set sail for our homeland. They have finally realised that they will never take Troy. They built this horse as an acknowledgment of the might of Troy and left it as a tribute to your invincible strength.'

The Trojans were weary of war and flattered by Sinon's extravagant praise. Wanting to believe that the Greeks had finally left Troy, they decided to bring the horse into the city as a symbol of their victory.

Some people in the city were troubled by the monstrous creature and did not want it within the city walls, but their voices were lost in the confusion of the celebrations. Strong ropes were attached to the horse and excited citizens jostled each other to place their hand on a piece of rope and have the honour of pulling the Trojan horse through the city gates.

And so the Trojans themselves pulled the Greeks into their city. That night the soldiers crept out of the horse, opened the gates and admitted the army that was hidden outside. The Greeks defeated Troy and the rest is history. The term 'Trojan Horse' has now become a metaphor for any offer that looks beguiling but ultimately brings disaster.

7. What does the word 'wily' mean?
- (A) spiteful
  - (B) cunning
  - (C) defeated
  - (D) frightened
8. Which word best describes Sinon's feelings about his task?
- (A) despairing      (B) resentful      (C) impatient      (D) anxious
9. Who asked the question, 'Were they really free at last?'
- (A) Sinon
  - (B) the Trojans
  - (C) the Greek army
  - (D) Sinon's fellow soldiers
10. The Trojans were ready to believe Sinon's story because
- (A) they were tired of battling the Greeks.
  - (B) they knew that the Greeks had left Troy.
  - (C) their gods had told them that they would win.
  - (D) they were looking for an excuse to celebrate.
11. Which piece of information is missing from the text?
- (A) which side won the war
  - (B) where Sinon was waiting outside Troy
  - (C) why Sinon was chosen to perform the task
  - (D) how the wooden horse was taken inside the city of Troy
12. Which of the following could replace the word 'beguiling', as it used in the text?
- (A) attractive
  - (B) deceptive
  - (C) enormous
  - (D) threatening
13. Which of the following sayings is **NOT** a lesson that can be drawn from the text?
- (A) Always question flattery.
  - (B) Only celebrate a real victory.
  - (C) The prize always goes to the strongest.
  - (D) Some things are just too good to be true.

# Q&A with Garth Nix

**Q.** You are co-writing your new series, *Trouble Twisters*, with your friend Sean Williams. Is it hard to write a book with someone else when you are used to writing on your own? How does co-writing a book work?

**A.** It's actually been a lot of fun working on the book with Sean. While there are many different ways to co-write books, we have developed a process which basically starts with the two of us working out the story in some detail, accompanied by a whiteboard and numerous cups of tea (me) and soy hot chocolate (Sean). After that, we work up a chapter outline in even more detail, sending it back and forth until we're both happy with it. Then I write the first chapter and send it to Sean, who very speedily writes the first draft of the rest of the book. That comes back to me, and I revise and expand upon it, adding in detail and so on. Then I send that back to Sean who does another revision and then we kick it backwards and forwards for more revisions until it's done. At the end, it is very difficult for either of us to identify even a single sentence that we individually wrote, which is good. It makes it a real co-operative work.

Sean Williams and Garth Nix

**Q.** Where did the idea for *Trouble Twisters* come from?

**A.** I had a very basic idea that I described to Sean, who instantly added in some more ideas, and then we added in a lot more, and from there went on to actually develop those basic ideas into a story.

**Q.** Have you and Sean mapped out the complete *Trouble Twisters* series, or are some things left to chance?

**A.** We've outlined five books in some detail, but, as always, when you come to write them, things change, new and better ideas come along, characters turn out differently than they were envisaged and so on. That's part of the fun of writing.

## TROUBLE TWISTERS: BOOK 1

Garth Nix and Sean Williams

Paperback RRP \$15.99

In the first book in the new series, twins Jaide and Jack Shield move to a small coastal town to live with their eccentric grandmother. Soon they are drawn into an age-old struggle against an ancient entity called The Evil, and in the process discover their own magical gifts and heritage. This story has magical antiques, difficult cats, hordes of rats and a lighthouse!

14. The words 'back and forth' indicate that Nix and Williams
- (A) kept improving each other's work.
  - (B) had not written all the chapters together.
  - (C) travelled to and from each other's homes.
  - (D) preferred to work at a different pace to each other.
15. Which of the following connectives is **NOT** used in the text to indicate time?
- (A) 'While'
  - (B) 'After that'
  - (C) 'Then'
  - (D) 'At the end'
16. Why does Nix say that both he and Williams would find it hard to recognise a single sentence that each has written?
- (A) Both Nix and Williams no longer have their original drafts.
  - (B) Nix and Williams finished writing the book some time ago.
  - (C) The complicated details of the story have caused confusion.
  - (D) Writing co-operatively has resulted in many changes to their work.
17. The word 'envisaged', as it is used in the text, is closest in meaning to
- (A) revised.      (B) intended.      (C) approved.      (D) observed.
18. 'That's part of the fun of writing.'
- What does 'That' refer to?
- (A) the ability to write successfully in partnership with a friend
  - (B) the planning of the storyline of the books in a series
  - (C) how the creative process shapes the final story
  - (D) how an outline of a book provides direction
19. What is Nix's opinion of co-authoring the book with Williams?
- (A) He found it stimulating and enjoyable.
  - (B) He believed it was too time consuming.
  - (C) He resented his inability to decide details in the book.
  - (D) He was pleased he could write other books at the same time.
20. Which literary device is used in the series title *Trouble Twisters*?
- (A) rhyme      (B) contrast      (C) simile      (D) alliteration
21. Which of the following quotations is a colloquial expression?
- (A) 'It's actually been a lot of fun'
  - (B) 'we kick it backwards and forwards'
  - (C) 'but, as always'
  - (D) 'In the first book in the new series'
22. What genre is *Trouble Twisters: Book 1*?
- (A) historical fiction
  - (B) science fiction
  - (C) fantasy
  - (D) crime

Read *Kit's Cradle* and answer questions 23 to 27.

# Kit's Cradle

They've taken the cosy bed away  
That I made myself with the Shetland shawl,  
And set me a hamper of scratchy hay,  
By that great black stove in the entrance-hall.

I won't sleep there; I'm resolved on that! 5  
They may think I will, but they little know  
There's a soft persistence about a cat  
That even a little kitten can show.

I wish I knew what to do but pout, 10  
And spit at the dogs and refuse my tea;  
My fur's feeling rough, and I rather doubt  
Whether stolen sausage agrees with me.

On the drawing-room sofa they've closed the door,  
They've turned me out of the easy-chairs;  
I wonder it never struck me before 15  
That they make their beds for themselves up-stairs.

I've found a crib where they won't find me,  
Though they're crying 'Kitty!' all over the house.  
Hunt for the slipper! And riddle-my-ree!  
A cat can keep as still as a mouse. 20

It's rather unwise perhaps to purr,  
But they'll never think of the wardrobe-shelves.  
I'm happy in every hair of my fur;  
They may keep the hamper and hay themselves.

*Juliana Horatia Ewing*

23. Which word in the poem indicates uncertainty?
- (A) 'won't' (line 5)
  - (B) 'rather' (line 11)
  - (C) 'never' (line 15)
  - (D) 'perhaps' (line 21)
24. 'There's a soft persistence about a cat  
That even a little kitten can show.' (lines 7–8)  
The word 'even' is used here to emphasise that
- (A) cats are the most determined of all animals.
  - (B) not all small kittens are as determined as this one.
  - (C) age is no barrier to a small kitten getting its own way.
  - (D) kittens are more likely than cats to get their own way.
25. In the third stanza the kitten describes
- (A) how the family mistreated it.
  - (B) how it expressed its displeasure.
  - (C) how it had to steal food to survive.
  - (D) how the dogs had become its enemy.
26. In line 21 why did the kitten say, 'It's rather unwise perhaps to purr'?
- (A) It did not want the family to know it was no longer cross.
  - (B) It thought purring might stop it going to sleep.
  - (C) It did not want the family to find it.
  - (D) It was pretending to be a mouse.
27. Which of the following statements about the rhyming pattern in the poem is correct?
- (A) There is only one rhyme in each stanza.
  - (B) The rhymes occur in alternate lines in each stanza.
  - (C) The first lines of each stanza rhyme with each other.
  - (D) The last lines of each stanza rhyme with each other.

# How air got to be perfect

Earth's air has exactly the right mixture of gases you need to live. How do you think this perfect arrangement came to be? Let's imagine we could board a timeship and go back about 2.5 billion years, as life was beginning to take hold on Earth.

Stepping out of the timeship, we see a landscape of rock and murky water, with no trees or plants or even soil anywhere. But we don't have time to explore because in two minutes we would be dead! Why? Because the air has almost no oxygen in it. Not only that, we'd be roasted because the temperature is so high.

But let's say we're wearing oxygen tanks and heat-protector suits. We walk along and come to an ocean. Fortunately, our space suits are equipped for deep-sea diving, and we've brought underwater microscopes to help us see super-tiny things. We dive down to the ocean floor and find a world of strange, microscopic creatures. There are beings with tails that whip them along, and others with rows of little bristles moving like oars. There are creatures with shells and harpoons.

Mixed into this zoo are some blue-green creatures—the ancestors of plants. Over many millions of years, these tiny, plant-like forms have slowly released oxygen into the water and air. But the air still contains too little oxygen to support any but the smallest, simplest creatures.

Okay, let's get back in the timeship and travel forward several hundred million years. Now when we step outside things are more interesting. The Earth's crust has been moving, draining oceans and exposing their plant-rich floors. Plants have been able to spread across the land. There are all kinds of plants, and they're all releasing oxygen into the air. Now we can take off our oxygen masks and just breathe. Because the temperature is cooler now, we can also take off our heat-protector suits.

We can see animals too. Animals have evolved to feed on the plants. They are breathing in oxygen and breathing out carbon dioxide. The plants are taking in carbon dioxide and releasing oxygen. What a great, harmonious system!

Let's get back in the timeship for our last trip forward to our own time. Now we can see a vast array of different plants and trees. They are still taking in carbon dioxide and supplying the air with oxygen. Billions of years ago their ancestors changed the Earth's air by sending oxygen into it. By doing so, they created the essential conditions for life in all its glorious forms.

28. The word 'exactly', as it is used in the text, means
- (A) precisely.
  - (B) uniformly.
  - (C) faultlessly.
  - (D) comparatively.
29. What is the purpose of the question in the first paragraph?
- (A) to discover if the reader knows the answer
  - (B) to preview the topic of the text for the reader
  - (C) to encourage the reader to challenge information in the text
  - (D) to show the reader that the writer is uncertain about the answer
30. 'But we don't have time to explore because in two minutes we would be dead!'
- The writer says this in order to
- (A) point out the importance of the timeship.
  - (B) emphasise the need for adequate personal protection.
  - (C) reinforce the idea that the only safe place is underwater.
  - (D) highlight the nature of the Earth's environment at that time.
31. Which quotation from the text describes the early life forms from which plants evolved?
- (A) 'beings with tails that whip them along'
  - (B) 'others with rows of little bristles moving like oars'
  - (C) 'creatures with shells and harpoons'
  - (D) 'blue-green creatures'
32. The word 'harmonious', as it is used in the text, means that
- (A) the system has enough oxygen to support life.
  - (B) the system has finally allowed animals to evolve.
  - (C) the different parts of the system are working well together.
  - (D) the numbers of plants and animals in the system are balanced.
33. What is the most likely reason that the writer includes a timeship in the text?
- (A) to create a context for the oxygen tanks and heat-protector suits
  - (B) to prove that time is required to get the right mixture of gases
  - (C) to enable science to be explained in a narrative form
  - (D) to let readers know that this is an imaginative text
34. Which statement is supported by information in the text?
- (A) Movements in the Earth's crust are responsible for changing the air.
  - (B) Air temperatures are responsible for creating the right mixture of gases.
  - (C) Plants have contributed most to changing the proportion of gases in the air.
  - (D) Animals are more important than plants in maintaining the balance of gases in the air.
35. Which word best describes the style of the text?
- (A) poetic
  - (B) formal
  - (C) sentimental
  - (D) conversational

# LOST

Panting, I stared through the mass of purple blooms which hung from the curving branches of the trees like crystals on a chandelier. The petals trembled with the cool wind that curled unseen along the riverbank. I felt strangely energetic—nerves, fear, yearning—all in a tangle inside my head.

I stepped down the bank carefully, the pebbles slipping under my bare feet. I knew she was there somewhere. I could hear her faint cries, sounds so very small, as though someone was playing a piano very, very softly so as not to wake anyone up.

The bank was steep, my movement slow. When I reached the river I stood still, my toes under the surface of the cold bubbling water. I stretched them out like the fingers of a hand, pushing them into the chocolatey mud and thick sticky strands of weed, and listened for the tiny bleating. Where was she?

I knew this part of the river well. It was where I would come and read when I wanted to get away from home. Here by the river, my back against a tree, my eyes fixed on black printed words, I could sit peacefully, surrounded by the walls of a natural world that didn't care who I was at all. Ironically, this lack of concern comforted me. Home was not like that. At home I gasped for breath through the smog of concern, raised voices, banging doors, running feet, the screaming kettle, the tumbling, the shouting, the arguments, even the laughter.

Down by the river there was none of that. There was only music—ordered, melancholy music—where each instrument took its part and chimed or plucked or sang, it seemed to me, without conflict or even emotion. Croaking, piping, humming, hooting, rustling, rippling, splashing—if there were any struggles out here by the river, I couldn't tell.

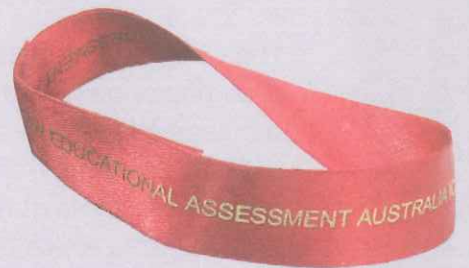

But now as I stood, listening for the little lost creature, I wondered. I heard the ghostly piping of birds, hollow and hard-hearted, the relentless fall of the river over rocks. The wind rose, cooler and stronger. I smelt the scent of the gums as the jacaranda flowers fell into the glassy surface in front of me, like bright feathers of a cruel-beaked exotic parrot. I waited, and I listened.

- 
36. The narrator was 'panting' at the beginning of the text because she was
- (A) running after an animal.
  - (B) running away from home.
  - (C) anxious about crossing the river.
  - (D) nervous about falling down the bank.

37. Why did the narrator describe stepping into the water in such detail?
- (A) to prove that she was adventurous
  - (B) to show that she was thinking deeply
  - (C) to invite the reader to share her experience
  - (D) to explain why her experience was important
38. The river was a favourite place for the narrator because
- (A) there were few interruptions.
  - (B) the complete silence was enjoyable.
  - (C) it was a good place to listen to music.
  - (D) there were many lost animals nearby.
39. Which of the underlined words in the second last paragraph is an adjective?
- (A) 'only'
  - (B) 'ordered'
  - (C) 'without'
  - (D) 'emotion'
40. This text is an extract from a longer narrative. The purpose of this extract is to
- (A) resolve a situation.
  - (B) expand a complication.
  - (C) describe the climax of the plot.
  - (D) develop characterisation and setting.

For questions 41 to 43 choose the best option to complete the passage.

A Möbius strip is a twisted loop with unusual properties. You can examine its properties \_\_\_\_\_ (41) \_\_\_\_\_ a ribbon or strip of paper, make a half twist and tape the ends together. \_\_\_\_\_ (42) \_\_\_\_\_ a ribbon or paper, the Möbius strip has only one side. If you draw a line down the middle of the strip until you reach your starting point, you will find that you \_\_\_\_\_ (43) \_\_\_\_\_ on both sides of the strip!

- |     |                   |     |                    |     |                  |

|     | (C) when using    |     | (C) Other than     |     | (C) have drawn   |
|     | (D) first you use |     | (D) When comparing |     | (D) were drawing |

# Bloodlicious

There are three species of bats that survive entirely by feeding on blood: the common vampire bat, the hairy-legged vampire bat and the white-winged vampire bat. But, don't worry, all three of these bat species are native to the Americas, so you won't find them creeping up on you in the middle of the night as you sleep safely in your bed.

When the vampire bat wakes up and emerges from its dark cave, it hunts for yummy warm-blooded victims, usually sleeping cattle and horses. Once it finds its meal, the bat flies down and lands quietly near the unsuspecting animal, slowly creeping towards it using its legs and wing-clad arms. Using specialised heat sensors on its nose called thermoreceptors, the bat locates where blood is flowing close to the skin. If the victim is particularly hairy, the vampire bat uses its canine and cheek teeth to shave away the hairs. The bat has razor sharp incisors that it uses to slice a seven-millimetre long and eight-millimetre deep cut. With blood freely seeping from its victim, the bat starts lapping up the warm gooey blood.

The vampire bat is well adapted to this liquid diet. Its saliva contains draculin to stop the prey's blood from clotting as it weeps out of the wound, as well as anticoagulants and compounds that prevent the constriction of blood vessels near the wound, so the blood will just keep flowing for the bat to slurp up.

The vampire bat's digestive system processes its meal so quickly that it can start excreting urine within two minutes of feeding. This is necessary as the vampire bat generally weighs about 40 grams and can drink more than 20 grams of blood in 20 minutes. So, if the bat wants to be able to take off and fly back to its cave, it must lose some of this weight very quickly. The trick is to quickly get rid of the blood plasma which has no nutritional value. The stomach lining rapidly absorbs the blood plasma which is then quickly transported to the kidneys and then to the bladder. Within two minutes, the bat is excreting plasma-rich urine and losing the additional weight so that it can launch itself back into the night sky.

This blood-feeding habit is called hematophagy and is not limited to vampire bats. Certain species of leeches, fish and worms also love feasting on the nutritious, red, life-sustaining nectar!

44. Which of the following quotations best supports the idea expressed in the title *Bloodlicious*?
- (A) 'it hunts for yummy warm-blooded victims'
  - (B) 'With blood freely seeping from its victim'
  - (C) 'the blood will just keep flowing'
  - (D) 'This blood-feeding habit is called hematophagy'
45. Which of the following describes the stages of feeding of a vampire bat?
- (A) locate victim → land → locate blood → cut skin → feed
  - (B) land → locate victim → locate blood → cut skin → feed
  - (C) locate victim → land → cut skin → locate blood → feed
  - (D) land → locate victim → cut skin → locate blood → feed
46. Which of the following summarises the third paragraph?
- (A) Types of prey
  - (B) Feeding method
  - (C) Food preferences
  - (D) Special adaptations
47. According to the text, why is a vampire bat vulnerable immediately after feeding?
- (A) It is too heavy to fly.
  - (B) It loses its sense of direction.
  - (C) Its kidneys and bladder are under stress.
  - (D) Its digestive system is unable to deal with plasma.
48. What does the writer assume about her readers?
- (A) They are not afraid of the dark.
  - (B) They do not live in the Americas.
  - (C) They understand that vampire bats are sneaky.
  - (D) They know that there are three species of vampire bats.
49. Which of the following is an example of a metaphor?
- (A) 'wing-clad arms'
  - (B) 'starts lapping up the warm gooey blood'
  - (C) 'quickly transported to the kidneys'
  - (D) 'red, life-sustaining nectar!'
50. Based on the language used, the text is most likely to appear in
- (A) a scientific journal.
  - (B) a daily newspaper.
  - (C) a children's magazine.
  - (D) a science encyclopedia.
