PAPER C

2015 ICAS

International Competitions
and Assessments for Schools

SCIENCE

DO NOT OPEN THIS BOOKLET UNTIL INSTRUCTED.

40 QUESTIONS

TIME ALLOWED: 55 MINUTES

STUDENT'S NAME:

Read the instructions on the **ANSWER SHEET** and fill in your **NAME, SCHOOL** and **OTHER INFORMATION**.

Use a 2B or B pencil.

Do **NOT** use a pen.

Rub out any mistakes completely.

You **MUST** record your answers on the **ANSWER SHEET**.

Mark only **ONE** answer for each question.

Your score will be the number of correct answers.

Marks are **NOT** deducted for incorrect answers.

There are **40 MULTIPLE-CHOICE QUESTIONS** (1–40).

Use the information provided to choose the **BEST** answer from the four possible options.

On your **ANSWER SHEET** fill in the oval that matches your answer.

You may use a calculator and a ruler.

1. Tess wanted to know the average length of a lima bean. She lined up 5 lima beans along a ruler.

What is the average length of these lima beans?

- (A) 1 cm
- (B) 2 cm
- (C) 5 cm
- (D) 10 cm

2. Sara noticed that the shadow made by the flagpole on sunny days changed position throughout the day. The diagrams show the flagpole and its shadow at different times during a day.

Which diagram shows the shadow of the flagpole at 2 pm on this day?

3. This chart indicates the healthy body mass range for adults of different heights.

Allan is 165 cm tall and weighs 84 kg.

According to the chart, Allan is

- (A) underweight. (B) a healthy weight. (C) overweight. (D) obese.

4. The ends of a magnet are called poles. One end is the north pole (N) and the opposite end is the south pole (S). Two different poles will move towards each other. Two poles that are the same will push away from each other.

In which diagram will all three magnets move towards each other?

5. Ms Julie dropped a large heavy ball from different heights. Using a stopwatch, she timed how long it took for the ball to hit the ground.

Ms Julie repeated the experiment using a smaller, lighter ball. She recorded both sets of results in these tables.

Large heavy ball	
Height (m)	Time (s)
5.0	1.01
7.5	1.24
10	1.43
15	1.75

Small light ball	
Height (m)	Time (s)
5.0	1.01
7.5	1.24
10	1.43
15	1.75

Based on her results, what can she conclude?

- (A) Only the size of the ball affects how fast it falls.
- (B) Only the mass of the ball affects how fast it falls.
- (C) Neither the size nor the mass of the ball affects how fast it falls.
- (D) She cannot conclude anything about what affects how fast a ball falls.

6. Sudden movements of large sections of rock deep within Earth's crust release energy that sends shock waves in all directions. There are several types of shock waves:

- P-waves can travel in all directions through solids and liquids.
- S-waves can only travel through solids.
- L-waves can only travel along Earth's surface.

Scientists noticed that if an earthquake occurs in the Northern Hemisphere, some recording stations in the Southern Hemisphere will detect P-waves but not S-waves.

Why were no S-waves detected at station X?

- (A) The crust is solid.
- (B) The mantle is solid.
- (C) The outer core is liquid.
- (D) The inner core is liquid.

7. Andy performed a simple experiment to see how far water rises inside different straws.

He placed three straws of different widths into a container of water.

Based on his results, what can Andy conclude?

- (A) The wider the straw, the higher the water rises.
 - (B) The longer the straw, the higher the water rises.
 - (C) The narrower the straw, the higher the water rises.
 - (D) The water in all straws will soon reach the same height.
8. When a hot object touches a cold object, heat energy flows from the hot object to the cold object. The cold object warms up and the hot object cools down.

Ice cubes can be used to make warm soft drinks colder. When the ice cubes are in a warm soft drink, the ice eventually melts.

How does adding ice cubes to a soft drink cool the drink?

- (A) The cold from the ice cubes moves to the glass surrounding the soft drink.
- (B) The cold from the ice cubes moves to the soft drink as they melt.
- (C) The ice cubes absorb heat from the soft drink as they melt.
- (D) The ice cubes melt so there is more soft drink.

9. A car travelling at 60 km per hour leaked oil onto the road. An oil drop fell onto the road every second, making this pattern on the road:

Later, the car travelled at 90 km per hour. What did the oil drop pattern on the road look like at this speed?

(A)

(B)

(C)

(D)

10. Sally uses this padlock to chain her bicycle to a bike rack.

To unlock the padlock she has to carry out the following steps:

1. Turn the dial to zero using the shortest distance.
2. Turn the dial anticlockwise and stop at 30.
3. Turn the dial clockwise and stop at 25.
4. Turn the dial back to 0 using the shortest distance.

How many times will the number 20 go past the red arrow from its current position?

(A) 1

(B) 2

(C) 3

(D) 4

11. The following table lists information about some of the planets in our solar system.

Name of planet	Diameter of planet (km)	Average distance from the Sun (km)	Time to orbit the Sun (Earth days)
Mars	6 792	227 900 000	687
Mercury	4 879	57 900 000	88
Jupiter	142 984	778 600 000	4 331
Saturn	120 536	1 433 500 000	10 756
Venus	12 104	108 200 000	225

Which statement is supported by the information in the table?

- (A) Smaller planets take longer to orbit the Sun than larger planets.
(B) The largest planet takes the longest time to orbit the Sun.
(C) Planets further from the Sun have smaller diameters than planets closer to the Sun.
(D) Time to orbit the Sun increases with increasing distance from the Sun.

12. The heart has two main functions:

- to pump blood to the lungs to remove carbon dioxide and pick up oxygen
- to pump blood carrying oxygen to all parts of the body.

This process can be summarised by this flowchart.

Which statement is supported by the information in the flowchart?

- (A) Blood leaving the heart has low levels of oxygen.
(B) The left side of the heart pumps blood to the lungs.
(C) Blood containing high levels of oxygen is pumped from the left side of the heart.
(D) The right side of the heart pumps blood that has high levels of oxygen.

For questions 13 and 14 use the information below.

Sharon and Andrew wanted to compare four different brands of paper towel. They had equal-sized paper towels of four different brands: Wet-away, Drya, No Mess, Soaka. They had four measuring cylinders, one for each paper towel. Each measuring cylinder contained 20 mL of water.

Sharon and Andrew slowly poured water onto each paper towel until the paper towel could not soak up any more. The diagrams show the water left in the measuring cylinders after they had stopped pouring water onto the paper towels.

13. Was this a fair test?

- (A) No, because each paper towel soaked up different amounts of water.
- (B) Yes, because they used the same amount of water each time.
- (C) No, because the paper towels were all different brands.
- (D) Yes, because each paper towel was the same size.

14. What were Sharon and Andrew trying to find out?

- (A) Are all paper towels the same size?
- (B) Will paper towels soak up different liquids?
- (C) Which liquid do the paper towels soak up best?
- (D) Do all paper towels soak up the same amount of water?

15. The graph shows the percentage of different minerals in a sample of granite.

Percentage of minerals found in a sample of granite

Approximately what fraction of the granite is orthoclase?

- (A) $\frac{1}{4}$
(B) $\frac{1}{3}$
(C) $\frac{2}{3}$
(D) $\frac{3}{4}$

16. Lily has four different liquids that do not mix with each other. She tested three different combinations of these liquids.

The diagrams show her results.

Which statement is supported by the diagrams?

- (A) Liquid 1 will float on liquid 4.
(B) Liquid 2 will float on liquid 3.
(C) Liquid 3 will float on liquid 2.
(D) Liquid 3 will float on liquid 4.

17. Ben and Joe each made a rain gauge to measure how much rain fell during a storm.

The diagrams show what their rain gauges look like.

Ben's rain gauge

Joe's rain gauge

The rain gauges were placed near each other in Ben's backyard during an overnight rainstorm.

When Ben and Joe checked the rain gauges the next morning, what should they have seen?

- (A) The volume of water in each rain gauge was the same.
- (B) Joe's rain gauge contained less volume of water than Ben's rain gauge.
- (C) Ben's rain gauge contained less volume of water than Joe's rain gauge.
- (D) The water level in Joe's rain gauge was higher than the water level in Ben's rain gauge.

18. Bacteria can be classified into three categories:

- predators that kill other microorganisms
- mutualists that form a relationship with other organisms in which both organisms benefit
- pathogens that have a parasitic relationship with other organisms. This means that the bacteria benefit but the organism is harmed.

Lactobacillus is a species of bacteria that is found in the intestines of humans. These bacteria change sugars into lactic acid which stops the growth of some harmful bacteria.

Into which category should ***Lactobacillus*** be classified?

- (A) predators
- (B) mutualists
- (C) pathogens
- (D) harmful bacteria

For questions 19 and 20 use the information below.

Different animals have different hearing ranges. An animal's lower limit of hearing is the lowest frequency sound it can hear. Its upper limit of hearing is the highest frequency sound it can hear. The hearing range of an animal is made up of all the sound frequencies in between.

The table shows information about some animals.

Animal	Lower limit of hearing (Hz)	Upper limit of hearing (Hz)
bird	250	21 000
crocodile	20	6 000
dog	15	50 000
bat	1 000	150 000
African moth	5 000	110 000
dolphin	150	150 000

19. How many of these animals can hear a sound with a frequency of 125 Hz?

- (A) 0 (B) 1 (C) 2 (D) 3

20. A siren makes a noise that both the bat and the crocodile are able to hear.

In what range must the frequency of the siren noise lie?

	Lowest frequency (Hz)	Highest frequency (Hz)
(A)	20	1 000
(B)	20	6 000
(C)	1 000	6 000
(D)	6 000	150 000

21. Andrew wanted to compare the hardness of five minerals. He tried to scratch each mineral using the following objects: his fingernail, a piece of glass, the lead in a pencil, a copper coin, and an iron nail.

The table shows whether each object scratched the minerals or not.

		Minerals				
		calcite	quartz	gypsum	fluorite	feldspar
Scratching object	fingernail	no	no	yes	no	no
	glass	yes	no	yes	yes	yes
	lead in pencil	no	no	no	no	no
	copper coin	yes	no	yes	no	no
	iron nail	yes	no	yes	yes	no

What is the correct order of minerals from softest to hardest?

- (A) calcite, quartz, gypsum, fluorite, feldspar
 (B) quartz, calcite, gypsum, fluorite, feldspar
 (C) quartz, feldspar, fluorite, gypsum, calcite
 (D) gypsum, calcite, fluorite, feldspar, quartz

For questions 22 to 24 use the information below.

Amy carried out an investigation using a spring and some masses.

She set up her equipment as shown.

She attached a mass to the spring and then measured and recorded how far the spring stretched. She repeated the experiment several times using different masses.

The graph shows her results.

22. Amy removed the mass and replaced it with some keys. The keys made the spring stretch by 7.2 cm. What was the approximate mass of the keys?
- (A) 145 grams (B) 140 grams (C) 130 grams (D) 125 grams
23. How much would the spring stretch with a mass of 20 grams attached to it?
- (A) 1 cm (B) 2 cm (C) 3 cm (D) 4 cm
24. Which statement is supported by the graph?
- (A) When the mass doubles, the stretch of the spring will halve.
(B) When the mass doubles, the stretch of the spring also doubles.
(C) With increasing mass, the stretch of the spring is reduced.
(D) Each time a different mass is added, the total stretch is reduced.

25. Ben has four test tubes containing sugar solutions of different concentrations. The sugar concentrations are 5%, 10%, 15% and 20%.

Ben knows the following:

- test tube 4 contains the highest concentration
- test tube 1 does not have the lowest concentration
- test tube 2 contains a greater sugar concentration than test tube 1.

Which test tube contains the 15% sugar solution?

- (A) 1 (B) 2 (C) 3 (D) 4

26. The diagram shows the layers that form Earth's atmosphere.

- The exosphere is the furthest layer from Earth's surface and continues to outer space.
- The troposphere is where most of our weather occurs. Living things are found in this layer.
- The stratosphere is where jet aircraft fly.
- The thermosphere is where satellites orbit Earth, above the flight path of jet aircraft.
- The mesosphere is the middle layer and is where many meteors burn up.

Which option matches the letter to the layer of the atmosphere?

	V	W	X	Y	Z
(A)	troposphere	stratosphere	mesosphere	thermosphere	exosphere
(B)	troposphere	thermosphere	mesosphere	stratosphere	exosphere
(C)	thermosphere	stratosphere	troposphere	mesosphere	exosphere
(D)	troposphere	mesosphere	exosphere	thermosphere	stratosphere

27. The chemical formula for water is H_2O and can be represented by the following diagram:

The chemical formula for carbon dioxide is CO_2 and can be represented by the following diagram:

Methane, the main gas found in natural gas, has the chemical formula CH_4 .

Which diagram could represent methane?

28. The Sun rises in the east and sets in the west.

Lee took this photograph of a beach umbrella at 9 am.

Where was Lee standing when he took this photograph?

- (A) north of the umbrella
(C) east of the umbrella

- (B) south of the umbrella
(D) west of the umbrella

29. Tara poured some water into a measuring cylinder and then tilted the measuring cylinder as shown.

How much water (mL) is in the measuring cylinder?

- (A) 20
- (B) 30
- (C) 35
- (D) 40

30. Objects that have a density greater than that of water sink in water. Objects that have a density less than that of water float on water. The lower the density of the object, the higher it will float.

Sam had four solid spheres, each one made from a different type of wood. She placed the wooden spheres into a container with water.

The table shows the density of each type of wood. The density of water is 1.0 g/cm^3 .

The diagram shows what she observed.

Type of wood	Density (g/cm^3)
balsa	0.14
box	1.10
gum	0.95
maple	0.53

Which sphere was made of maple wood?

- (A) W
- (B) X
- (C) Y
- (D) Z

31. Matter can exist as a solid, a liquid or a gas. In a laboratory, substance X melted at 60°C and boiled at 85°C .

Which option shows the state of substance X at the temperatures indicated?

	State of X at 50°C	State of X at 100°C
(A)	solid	gas
(B)	solid	liquid
(C)	liquid	gas
(D)	gas	solid

32. The Law of Superposition states that layers of rock in an undisturbed sequence of rocks are arranged in a time sequence, with the oldest layer at the bottom and the newest layer on top.

The diagram shows three rock layers 1, 2 and 3.

The diagram also shows a fault line, 4, where earthquake activity caused the rocks to move past each other.

The diagram shows an intrusion, 5, where molten rock from deep inside Earth pushed its way through the layers towards the surface.

In which order were the different rock layers, the fault and the intrusion formed, from oldest to youngest?

- (A) 1, 3, 2, 4, 5
- (B) 3, 2, 1, 4, 5
- (C) 3, 2, 1, 5, 4
- (D) 5, 4, 1, 2, 3

33. The diagram shows four rock formations in a particular area. Each rock formation has horizontal rock layers. Within some of the rock layers there are fossils. Rock layers of the same age have the same fossils in them. Within each rock formation, older rock layers are found below younger rock layers.

Which is the youngest fossil?

- (A) 
- (B) 
- (C) 
- (D) 

34. Andy designed an experiment to determine which of the four objects was the heaviest.

The diagrams show what Andy did to determine the heaviest object.

Which object is the heaviest?

- (A)  (B)  (C)  (D) 

35. Bananas change colour from green to yellow as they ripen.

All fruit produces ethylene gas when ripening. This gas speeds up the ripening of the fruit.

Tom wanted to see if he could make a banana ripen faster.

He took four plastic bags and placed bananas in them as shown in the diagram.

Which bags must Tom choose to make his investigation a fair test and for what reason?

	Bags	Reason
(A)	1 and 3	to see which banana ripens first
(B)	2 and 3	to see which banana ripens first
(C)	1 and 4	to see if a ripening banana makes a difference to the ripening of a green banana
(D)	2 and 4	to see if a ripening banana makes a difference to the ripening of a green banana

For questions 36 and 37 use the information below.

Jenny performed an experiment using masses to stretch two different coloured lengths of rubber.

Each piece of rubber was initially 5 cm long. She hung masses from the end of each piece of rubber.

Her teacher told her

- each red length of rubber will stretch 1 cm for each 25 g mass hanging from it.
- each blue length of rubber will stretch 2 cm for each 25 g mass hanging from it.

Using four different masses, Jenny performed the experiment as follows:

36. How heavy is mass 4 in grams?

- (A) 25 (B) 50 (C) 75 (D) 100

37. Which option lists the masses from lightest to heaviest?

- (A) 3, 2, 1, 4 (B) 3, 1, 4, 2 (C) 1, 2, 3, 4 (D) 1, 3, 4, 2

For questions 38 to 40 use the information below.

The following are some factors that influence whether a driver stops in a short enough distance to avoid an accident.

- reaction distance = initial speed of the vehicle $\times$ driver's reaction time
- braking distance = the distance travelled during braking
- stopping distance = reaction distance + braking distance

The graph shows data relating to these factors.

38. A driver is travelling at 100 km/h. The driver applies the brakes.
How far will the car travel after the driver applies the brakes?
- (A) 42 m (B) 85 m (C) 127 m (D) 150 m
39. Based on the data, which statement is correct?
- (A) The faster the vehicle is travelling, the shorter the reaction time.
 (B) Reaction distance decreases as stopping distance increases.
 (C) The slower the reaction time, the shorter the stopping distance.
 (D) The faster the vehicle speed, the greater the reaction distance.
40. What was the driver's approximate reaction time when travelling at 60 km/h (1000 metres per minute)?
- (A) 0.4 seconds (B) 0.5 seconds (C) 0.9 seconds (D) 1.5 seconds

TO ANSWER THE QUESTIONS

Example: Ari added cordial to water to make a jug of drink.
What will be the volume of the drink in the jug?

- (A) 50 mL
- (B) 150 mL
- (C) 200 mL
- (D) 250 mL

The answer is 250 mL, so you would fill in the oval (D), as shown.
